2. FAQ	0
2.1 Q&A implementation of hydrogen delegated acts	0
3. RFNBO case studies	0
3.1 1: Water electrolysis, pure fully renewables	0
3.2 2: Fully renewable and grid electricity	0
3.3 3: Ammonia + cracking	0
3.4 4: Reverse Water Gas Shift and Fischer Tropsch synthesis to kerosene	0
3.5 5: Biogenic syngas with surplus CO and RFNBO hydrogen	0
3.6 6: Partly replacing fossil inputs like in coal Fischer Tropsch	0
3.7 7: Full example: Mixed RFNBO and low-carbon hydrogen transported as methanol to EU and transformed to diesel and kerosene	0

1. Overview

What is the purpose of this site?

This document was created to help to understand how the calculation of carbon intensity and share of RFNBO and RCF should be implemented. Each case study focuses on one element that might be unclear. The last case study shows a more complex and realistic case.
